SUMMARY

Pre-final year B.Tech CSE student (graduating 2027) with experience in AI/ML, computer vision, and full-stack development. Built projects using Python, FastAPI, React, OpenCV, and scikit-learn through internships and personal work. Seeking Software Engineering and AI/ML internship opportunities to build real-world applications.

EXPERIENCE

AI Intern | Unlax Academy

Feb 2026 – Apr 2026

Virtual

- Built a pose-estimation module using MediaPipe and OpenCV to detect body landmarks from webcam input and track basic movement patterns.
- Wrapped the model in a FastAPI endpoint and tested it with sample video inputs; wrote Python scripts to preprocess frames before inference.

AI/ML Intern | Edunet Foundation

Jan 2026 – Mar 2026

Virtual

- Built an AI-based music mood classification project using Librosa and scikit-learn for audio feature extraction and mood prediction.
- Worked with audio preprocessing, feature analysis, and basic remixing techniques using Python.

Machine Learning Intern | Fox Trading

Aug 2025 – Nov 2025

Virtual

- Built a diabetes prediction model using the Pima Indians dataset with data preprocessing, feature analysis, and classification techniques in scikit-learn.
- Compared Logistic Regression and Random Forest models using cross-validation and evaluated prediction accuracy on medical diagnostic data.

PROJECTS

AI Fitness Assistant | React, FastAPI, MediaPipe, OpenCV, MySQL

- Captures webcam frames at 1 fps, sends them to a FastAPI backend, and uses MediaPipe Pose to extract 33 body landmarks for rep counting across 3 exercises (curls, push-ups, squats).
- Scores form on a 0–100 scale with simple per-rep feedback (e.g. “back not straight”); saves session data to MySQL and displays progress in a React dashboard.

AI Music Mood Classifier | Python, scikit-learn, Librosa, Streamlit, SQLite

- Extracted audio features (tempo, RMS energy, spectral centroid, ZCR) using Librosa; trained a Random Forest on 80 manually labelled samples across 4 mood classes – achieved 76% accuracy with a stratified train/test split.
- Deployed as a Streamlit app with mood-based pitch and tempo adjustments; song library stored in SQLite with a one-click download option.

Diabetes Risk Prediction | Python, pandas, scikit-learn

- Cleaned the Pima Indians dataset (768 samples) by imputing zero-valued medical columns with median values; compared Logistic Regression and Random Forest using 5-fold cross-validation – Random Forest performed better at around 79% accuracy.

SKILLS

Languages : Python, Java, HTML, CSS

AI / ML : scikit-learn, pandas, NumPy, OpenCV, MediaPipe, Librosa

Web Development : FastAPI, React.js, Streamlit

Tools : Git, GitHub, MySQL, SQLite, Jupyter Notebook, VS Code

EDUCATION

B.Tech in Computer Science Engineering | ACS College of Engineering, Bengaluru
CGPA: 9.14

2023 – 2027
